

Sustainable Comfort

HIGH EFFICIENCY FLOODED WATER COOLED CHILLER With SCREW COMPRESSOR

1 GB First Class

FOCSWATER.E Series

 CLIMAVENETA

Core Technical Concept

Energy efficiency
Comfort and reliability
Customer-made approach
Environmental respect

Energy saving Choice

CLIMAVENETA constantly strive technology innovation to deliver better performance and higher reliability products consistently on the basis of customer focus. FOCSWATER.E Series Water-cooled Flooded Higher Efficiency Screw Chiller deliver superior full load performance and is also AHRI certified. It's equipped with latest W3000 microprocessor, HFC134a refrigerant, new designed hi-efficiency heat exchanger. The optimized design makes the system more compatible, higher efficiency, more environment friendly and reliable. It is ideal for both commercial and industrial applications. Especially for the FOCSWATER.E-INV screw chiller with inverter, part load performance is also superior and especially suitable for large comfort complexes with variable population and unstable cooling demand, such as railway, hotel, hospital, etc.

Screw Compressor

- Semi-hermetic twin screw compressors with special designed for HFC 134a, featuring in high efficiency compression and operation under full load and part load condition;
- Precisely manufactured twin rotor and aerospace-grade bear result in reliable performance, low noise and stable operation;
- Direct-drives motor and least moving part make whole the unit without other energy lost which also contribute to better operation efficiency;

Inverter Technology

- Inverter start as standard to reduce power in-rush at start-up
- A DC choke is integrated in the inverter to reduce current harmonic distortion to the inverter.
- Noise much lower at partial load conditions, making a friendly environment especially for applications with large population.
- Onboard inverter installed and connected at factory, easy installation on site.

Flooded type evaporator

- The copper tube of flooded type evaporator are completely dipped inside the boiling liquid refrigerant. Thanks to this design, the unit performance and COP are enhanced obviously;
- Super high efficiency copper tube are designed with patent technology. The external screw on the tube increases the evaporation of the refrigerant and is beneficial for the drop condensation, so it reduces the heat transfer temperature difference between tube internal surface and external surface effectively;
- In order to achieve perfect water perturbation and turbulent heat transfer, the internal surface of the copper tube is also special designed;
- Because the chilled water flows inside the tube, it's quite easy to clean and maintenance.

Electric Expansion Valve

The electric expansion valve is featured by its precise control, high sensitivity and well adaption to the part load condition. So CLIMAVENETA cooperate with world leader supplier for best performance both for full load and part load condition.

Environment Friendly

- Adopting HFC134a
- Optimized refrigerant system for better electric saving, lower CO₂ emission and higher operation efficiency.

HIGH EFFICIENCY FLOODED WATER COOLED CHILLER With SCREW COMPRESSOR

High Stability

- The chiller is strictly designed, manufactured and tested based on international or national standard, such as AHRI, EN, UNI, JIS and GB/T18430.1
- The built-in 3-stage oil separator and external 2-stage oil separator are dedicated for the best performance of gas-oil separation.
- The unique oil return kit are used to makes sure the performance.
- Each unit is fully tested by strict process for best reliability and to meet customer's request.
- The protection level of unit external panel comply with GB4208-2008 standard.

Easy Installation

- Compact design for floor area saving.
- The unit is oil and refrigerant charged before delivery, and it's completely factory tested under all range loading.
- The pressure difference type water flow switch is already installed on the chiller before delivery (we suggest to install water flow switch on piping).

Safety of Electrical Devices

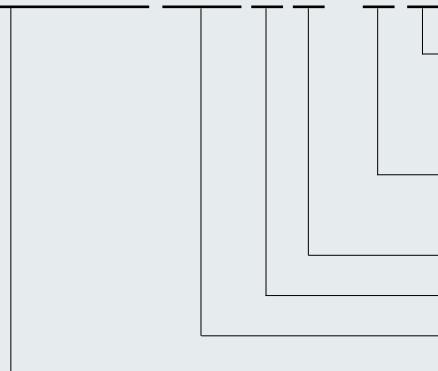

- The electric system is designed based on IEC60204-1-2005/GB5226.1-2008 standard. And the system comply with the EMC standard.
- The unit main power is inter locked with the bar breaker on the electric panel door. This special design aims to make sure the safety of the maintenance engineer.
- The electric component, such as the phase fault, phase unbalance, are all standard configuration for the chiller.

Convenient Maintenance

- Full computer controlling, menu displaying, unit self-checking as well as the load adjusting and safety is completely controlled by the microprocessor. Daily operation is only to switch on the unit.
- Multi-circuit design are better for standby request of the system
- The unit is available for functions such as fault protection, memorizing and alarming. All faults are clearly displayed.
- Each circuit has the check valve and "Pump Down" function for easy repairing.

Cooling Capacity(RT)

High Efficiency Flooded Water Cooled Chiller with Screw Compressor

FOCSWATER3152E-INV

Water-cooled Flooded Higher Efficiency Inverter Screw Chiller with 315 RT cooling capacity, configured with 2 inverter compressors, featured by HFC134a refrigerant, flooded evaporator, power supply 380V/3Ph/50Hz.

Latest control system

The chiller adopts a new control system with a friendly human-machine interface, excellent controls and adjustments ability, strong capabilities of function expansion, monitoring and management, as well as strong compatibility. The chiller also contains several optional accessories, and adds remote and group control functions.

Friendly human-machine interface

The operation screen is embedded in the unit for easy operation and good protection. The automatic control by the computer realizes unattended operation.

LCD screen can display data and parameter adjustment in various languages and menus. According to the tradition of Climaveneta, the status and parameters of the compressor are visually displayed individually to make sure the operating status clear at a glance.

Unit control and operation management

The advanced microcomputer intelligent control system of W3000 contains specially designed control algorithm of Climaveneta. It highlights the energy efficiency and reliability of the unit. The balanced running time of FIFO compressor prolongs the life of machine. The automatic adjustment of the output load makes the machine more energy saving. Combining with the load shedding system of the compressor can achieve 25-100% stepless adjustment. The adjustments and settings of the operating parameters can adapt to different environments. The temperature and pressure protection using analog measurement can predict and prevent failure and increase reliability.

Network communication and building management control

The chiller supports BMS connection and can connect to common BMS systems such as Climaveneta, De'Longhi, MODBUS, LONWORKS, BACNET and so on.

FWS network server

Microcomputer intelligent controller can be equipped with FMS network server to monitor, set and adjust parameters and control the unit operation through LAN or Internet.

Fault protection, alarm and analysis capabilities

The microcomputer intelligent controller contains perfect functions of fault protection, alarm, recording and analysis. It has protection functions of high/low pressure switch, lack of phase, reverse phase, overload, overcurrent, overheat, exhaust temperature, water flow, frost and so on. The controller also achieves fault recording and alarm display. The unique "Black Box" fault recording and analyzing system can record 400 failures and more than 200 field data before each failure. It can diagnose and remove faults rapidly to improve the technical support effect. By connecting to the Climaveneta remote service program, it can find potential failures before they occur and take proper preventive treatments.

HIGH EFFICIENCY FLOODED WATER COOLED CHILLER With SCREW COMPRESSOR

Control features

Micropocessor	W3000	Micropocessor	W3000
Remote ON/OFF dry contact	✓	Energy limit	OPT
Multi-language menu	✓	"Pump-down" when stopped	✓
Phase sequency relay	✓	ModBus communication protocol	OPT
Cumulative fault alarm	✓	BACNET communication protocol	OPT
Fault code	✓	Interface connection to LonWorks network	OPT
"BLACK BOX" function for alarm events	✓	Pump management	OPT
Switch-on self-check	✓	Spare pump management	OPT
Programming of daily/weekly program	Par.	External 4-20mA signal for water temp. setting	OPT
Evaporator inlet/outlet water temperature display	✓	Remote relay control	OPT
Compressor/ circuit failure display	✓	Local/Remote supervision through FWS	OPT
General unit alarms display	✓	Double set-point by external contact	OPT
Water temperature proportional control	✓	Set-point regulation from external signal(0-5v)	OPT
Regular programming operation	Par.	Compressor run-timer, time balance & FIFO	✓
Regular double set point	Par.	Management of the compressor working hours	✓

✓ Standard

OPT available on request

Par. available by modifying a value of the configuration parameters

Remote group controller

Sequencer

- LCD Visual display
- Group control and management
- Centralized control unit ON/OFF
- Pump control
- Protocols as ModBus, LonWork, Bance are optional

Remote group controller

- Touch-screen
- Group control and management
- Centralized control unit ON/OFF
- Pump control
- Protocols as ModBus, LonWork, Bance are optional

Recommended Operation Range

Cooling Condition	Water Inlet Temp (°C)		Water Outlet Temp (°C)	
	Min.	Max.	Min.	Max.
Chilled Water	-	23	5	15
Cooling Water	12*	-	22	47.5

Remark:

1. ** means the optional cooling water control is required, if the cooling water temperature is lower than the value;

2. For other operation condition which is exceed the range above, please contact Climaveneta office for detail information.

Remarks:

1. Cooling condition: Evaporator water inlet/outlet temp. 12/26.7°C , Condenser water inlet/outlet temp. 29.4/34.6°C
2. Standard water side pressure of evaporator and condenser is 1.0MPa, 1.6MPa and 2.0MPa is optional
4. Special application, such as river, sea water, please contact Climaveneta office for detail

Chillers with Total Heat Recovery

While in the refrigeration unit to a lot of condensation heat as waste heat released into the atmosphere, Climaveneta with total heat recovery technology, 100% recycling of waste heat from refrigeration, heating domestic hot water, low-cost or even free for the user save a lot of hot water running costs. Heat recovery unit built-in independent circuits, independent heating hot water.

General Technical Data of Total Heat Recovery
